

ASSEMBLY INSTRUCTION FOR AN ORGANIZER FOR THE BOARD GAME

Scythe

- For assembling you will need glue (we recommend the PVA glue), painter`s tape and utility knife
- According to the organizer`s assembly sequence separate the details from the form using a utility knife or squeeze them out with your fingers.
- Before gluing make sure that all the details are connected correctly. Check out this manual one more time and then use glue to the mating surfaces.
- While gluing the corner pieces, until the glue dries, you can “grab” the parts with a masking tape for a better contiguity.
- In rare cases, if the wooden details don`t fit in the technological grooves, you need to trim the corner of a tenon with a utility knife.

Explanation of Symbols

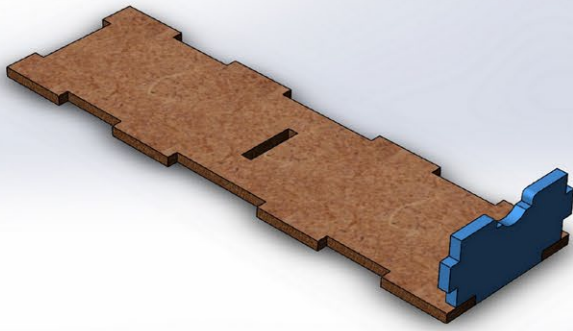

- while connecting the wooden parts together, place a thin layer of glue on the mating surfaces

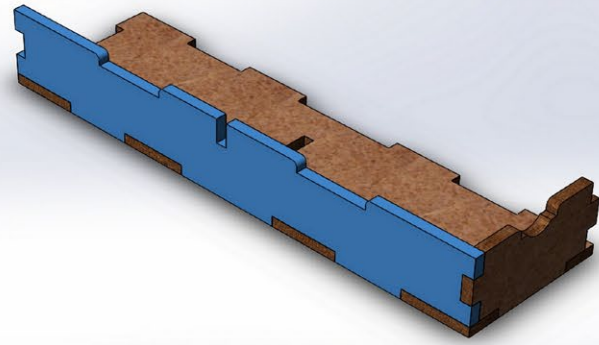

- **do not use glue** while connecting the parts
